

The new \$30 million Canada Games Centre was the focal point of the 2007 Canada Winter Games held in the City of Whitehorse.

The Games Centre features two ice sheets, two indoor soccer fields, a running track, as well as meeting rooms, retail and child care facilities. The building's energy system harvests waste heat from the ice making plant to heat the pool's water.

KZA served as design architect to Barr/Ryder Architects and Planners for this important community facility.
